

Position Announcement

Ecological Research Technicians

The S.M. Stoller Corp. Environmental, Surveillance, Education, and Research Program has positions available for students to work as paid technicians collecting and managing data on multiple ecological research projects funded by the Department of Energy (DOE). Many of the projects are related to sagebrush steppe rangeland and wildlife habitat management. These projects include long-term vegetation change, avian surveys, sagebrush population biology, and physiological ecology studies.

The positions are temporary, full-time for the 2006 field season (late May to mid-August). Employment start and end dates are flexible based on the end and start dates of university classes. The primary work location will be at the Idaho National Laboratory (INL), located 45 miles west of Idaho Falls. The close proximity of Yellowstone, Grand Teton, and Craters of the Moon National Parks, as well as great public access to National Forests and BLM lands make for excellent nearby outdoor recreation opportunities.

Qualifications: Preference will be given to college students in biology, range management, wildlife science, environmental science, ecology or a related major. Since field crews often work in remote areas of the INL with limited access, candidates must be mature, responsible and able to work with a minimum of supervision.

A cover letter, resume, transcripts and three letters of reference should be sent to:

Mr. Douglas K. Halford
S.M. Stoller Corporation
1780 First Street
Idaho Falls, Idaho 83401
dhalford@stoller.com
Voice: (208) 525-9358
Fax: (208) 525-3364

E-mail letters of reference will be accepted.

Deadline for the receipt of applications is March 15, 2006.

Questions should be addressed to Dr. Roger D. Blew at rblew@stoller.com or visit the Environmental Surveillance, Education and Research Program web page at www.stoller-eser.com.
